## PR-600

### ELECTRONIC

### WATCHMAN'S TIME

### RECORDER

## Ensure the protection of your facility

### Easy to use

At each check point, your security guard takes the station numbered key out of the station key box, inserts it into the recorder and turns it clockwise to record checking time. This produces a hardcopy report which includes the station

number, date, hour and minute for each check point visited. When finished at the station, the security guard simply returns the key to the station key box and proceeds to the next check point.

### Secure

To maintain the integrity of the patrol record, access to the record tape and time adjustment can be achieved only with use of a master key. Thus, whenever the recorder is opened with the master key, the letter "k" will appear on the tape. Every time the recorder is opened or closed, a small "o" will appear on the tape to denote the time and place that the recorder was opened.

As an added security measure, those companies who rotate patrol courses can require that each watchman register his or her I.D. number on the record tape at the beginning of each patrol route.

### Maintenance-free

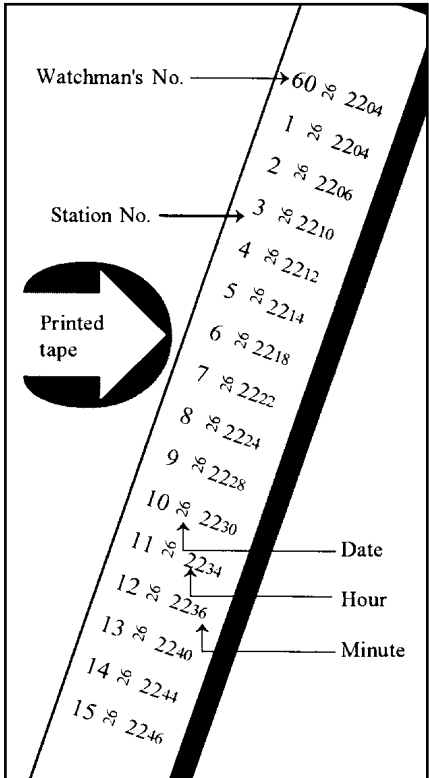

A self-contained dry cell battery provides you with months of maintenance-free use, requiring no need for regular winding on your part. In addition, the battery indicator light on the clock face will disappear to alert you to replace the battery.

### Lightweight and durable

Weighing slightly less than two pounds, the PR-600 is lightweight and easy to carry. As lightweight as it is, the recorder is designed for maximum protection against possible mishandling.

### Flexible

With up to 999 station keys available from the recorder, the PR-600 can be customized to meet the exact needs of your facility and patrol schedule. To prevent the loss of station keys, a lock box is optional.

SPECIFICATIONS	
Dimensions	6-13/16"(w) x 2-13/32"(d) x 4-21/32"(h)
Weight	1.76 lbs. (.8 kg)
Tape length	12M/roll
